Profile

Microsoft Power Platform Developer with a background in HR Shared Services, bringing genuine domain expertise to enterprise solution design. Independently built multiple projects to a production-grade level using Power Platform covering Dataverse, Model-Driven Apps, Canvas Apps, Power Automate and ALM. Delivered a live PWA for a real client through GMB Software Solutions. Active LinkedIn presence with 2,000+ followers and individual posts exceeding 60,000 impressions: [view linkedin profile](#).

Projects

Employee Lifecycle Hub

Microsoft Power Platform · Dataverse · Power Automate · Canvas Apps · Model-Driven Apps · Power BI · ALM · Security & Governance

- Architected and delivered an enterprise HR lifecycle solution using Dataverse, Power Apps, Power Automate, and Power BI, supporting scalable onboarding/offboarding operations with enforced relational integrity and zero orphaned production records.
- Designed a normalized 5-table Dataverse data model with lifecycle staging, lookup relationships, and security-aware architecture aligned to enterprise governance and ALM standards.
- Developed 3 production-grade Power Automate workflows using enterprise engineering patterns including idempotency controls, scoped Try/Catch exception handling, exponential retry policies, environment variables, and reusable deployment configuration.
- Delivered both Model-Driven and Canvas App solutions with role-based access control, manager-level data filtering, and optimized user experiences without reliance on custom connectors or unsupported customisation.
- Implemented a least-privilege Power Platform security architecture across Business Units, Security Roles, and Column Security Profiles, securing sensitive HR and Finance data at table, row, and column level.
- Embedded GDPR-compliant design principles into all automation solutions through Secure Inputs/Outputs, protected PII handling, and audit-conscious workflow configuration.
- Designed a Power BI analytics layer using star-schema modelling and operational KPI reporting, enabling embedded HR reporting for case management, SLA monitoring, and task completion analysis.
- Established a reusable 16-point Power Platform delivery framework covering governance, scalability, concurrency, observability, retry strategy, ALM portability, security, and flow resiliency.

Contractor Hub

- Built a full contractor management solution on Power Platform, covering everything from initial intake through to project delivery consisting of contracts, certifications, compliance docs, assignments, and timesheets all sitting in one place, backed by Dataverse.
- Designed the data model from scratch: 13 custom Dataverse tables with auto-number IDs, proper lookup relationships across contractors, contracts, projects, assignments and timesheets, plus a junction table to handle the many-to-many between contractors and their certifications.
- Built a two-stage Business Process Flow that guides users through capturing the right contractor data at intake, then triggers a Power Automate flow automatically when they advance to stage two — rather than relying on a manual button or separate process kick-off.
- Created a Power Automate flow that fires when the BPF step is executed which sends a team notification via Outlook, then writes back to the Contractor record in Dataverse to confirm it happened. Simple, but auditable.
- Delivered the Model-Driven App with a structured nav split into two areas for Contractor Management and Project Delivery so different users land in the right context without unnecessary noise.
- Wrote three custom JavaScript web resources to handle form behaviour: logic on the certification form, and a risk-scoring script on the Contract form that flags a warning banner if a contract has expired, the email field is empty, or no skills have been tagged. Catches data quality issues before they become problems.

- Set up three security roles (Contractor, Project Management, General Management) to make sure each user type only sees and does what they're supposed to
- Packaged the whole thing as a proper Power Platform solution with publisher details, versioning, and pipeline support built to be moved between environments.

Technical Skills

Platform	Microsoft Dataverse · Power Automate · Model-Driven Apps · Canvas Apps · Power BI · Solution-Aware Development
Workflow Automation	Cloud Flows · Scheduled & Event-Driven Automation · Retry Policies · Scoped Try/Catch Error Handling · Idempotent Design · Environment Variables · Flow Resiliency Patterns
Data & Reporting	Dataverse Relational Modelling · OData (\$filter, \$select, \$expand, \$top) · Power BI · Star Schema Design · DAX · Import Mode Optimisation
Security & Governance	Role-Based Access Control (RBAC) · Column Security Profiles · Business Units · Least-Privilege Security Design · Secure Inputs/Outputs · PII Protection
ALM & Architecture	Managed Solutions · DEV/UAT/PROD Deployment Strategy · Publisher Strategy · Environment-Aware Configuration · Solution-First Delivery
Compliance	UK GDPR · Audit-Conscious Design · Production-Ready Engineering · Scalability Planning · Observability · Failure-Mode Analysis
Methodology	Architecture-First Solution Design · Trade-Off Analysis · Pre-Build Technical Planning · Maintainability-Driven Engineering

Certifications

- PL-900: Microsoft Power Platform Fundamentals — Completed May 2026
- PL-200: Microsoft Power Platform Functional Consultant — Scheduled for July 2026

Professional Experience

HR Shared Services Administrator | Shaw Trust | Oldbury, UK | October 2024 — Present

- Administer end-to-end employee lifecycle processes including onboarding, offboarding, contract changes, and data management across HR systems.
- Apply direct working knowledge of HR data structures, business rules, and compliance requirements to Power Platform solution design and portfolio development.
- Manage high-volume transactional HR cases within a structured team environment, operating to strict SLA and data accuracy standards.

HR Support Officer | UK Home Office / Brook Street | Remote, UK | July 2022 — October 2024

- Administered end-to-end candidate lifecycle across multiple live resourcing campaigns, managing progression through recruitment systems from application through to pre-employment checks — directly informing the entity and lifecycle design of the Employee Lifecycle Hub.
- Executed structured onboarding workflows for candidates prior to formal pre-employment processing, applying process sequencing logic now reflected in Power Automate automation design.
- Maintained real-time candidate tracking using internal systems to identify bottlenecks and delays, developing the data monitoring instincts underpinning Power BI reporting and flow observability work.
- Diagnosed and resolved progression blockers to keep candidate pipelines moving — translating directly into solution-oriented thinking applied across Power Platform delivery.
- Managed end-to-end Smart Forms lifecycle: gathering correct data inputs, completing structured government forms, and routing completed forms to the appropriate department — mirroring the Canvas App document submission and automated routing logic built in the Employee Lifecycle Hub.

Freelance Developer | GMB Software Solutions | Birmingham, UK | 2024

- Sole developer contracted to design, build, and deploy a production Progressive Web App (PWA) for Bengal Welding, a real UK-based business client.

- Built using React, Node.js, Express, Supase as the backend and deployed live on Vercel with real user traffic.
- Managed the full project lifecycle from requirements gathering through delivery and invoicing as a registered freelance business.

Education

Arden University | June 2026 — Present
BSc Business Management (Foundation Year)
